

Weather Block

The weather is a common subject that all of us can discuss. To get quick data from a live weather service, it is a good idea to include a **Weather block** on an online course.

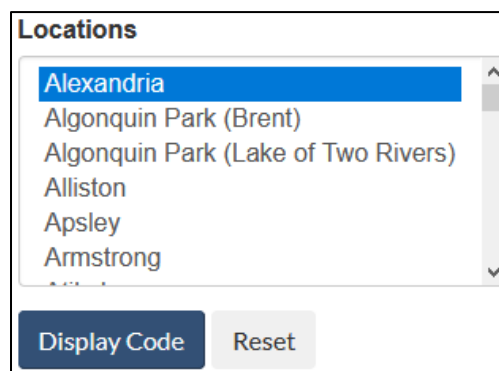

Creating an Embed Code for a Canadian Region

1. Go to the website, https://weather.gc.ca/business/index_e.html#rss
2. Scroll down to the **WeatherLink** section.
3. Choose a **Province/Territory** in the **HTML Code Creator** menu.
4. Click on the **Go** button.

The screenshot shows a form titled "HTML Code Creator". It has a label "Province/Territory" and a dropdown menu. The dropdown menu is open, showing a list of Canadian provinces and territories: British Columbia, Manitoba, New Brunswick, Newfoundland and Labrador, Northwest Territories, Nova Scotia, and Nunavut. A "Go" button is located below the dropdown menu.

Note: The **Locations** menu appears.

The screenshot shows a form titled "Locations". It has a dropdown menu with a list of locations: Alexandria, Algonquin Park (Brent), Algonquin Park (Lake of Two Rivers), Alliston, Apsley, and Armstrong. The "Alexandria" location is highlighted in blue. Below the dropdown menu are two buttons: "Display Code" and "Reset".

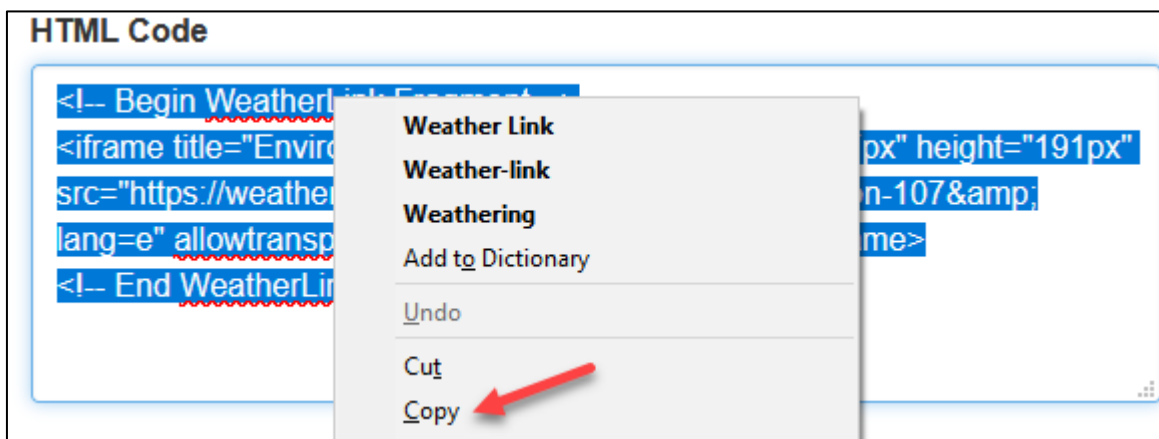

5. Choose a **location** from the drop-down menu.

- Click on the **Display Code** button.

Note: The **HTML Code** appears.

- Click inside the **HTML code** textbox.
- Select all of the **text**.
- Copy the text.

Note: The code is ready to be pasted.

Create a Weather Block

- On your course, click on the **Turn editing on** button.

Turn editing on

- In the **Navigation drawer**, click on the **Add a block** link.
Note: It is at the bottom of the **Navigation drawer**.

+ Add a block

- In the pop-up menu that appears, click on the **HTML** option.
- The **HTML** block appears in the right column of your course, click and drag on the **Move** icon to reposition the block vertically.

- In the new HTML block, click on the **Actions menu** icon.

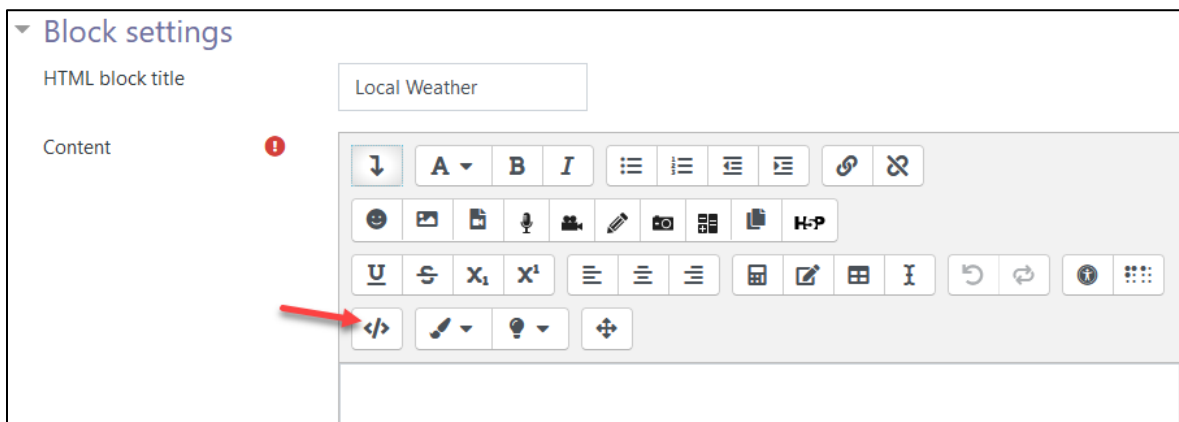

- In the drop-down menu, choose the **Configuring a (new HTML block) block** option.
Note: The **Configuring a (new HTML block) block** screen appears.

- Type an **HTML block title**.

- In the **Content** editor, click, on the **Show/hide advanced buttons** icon.

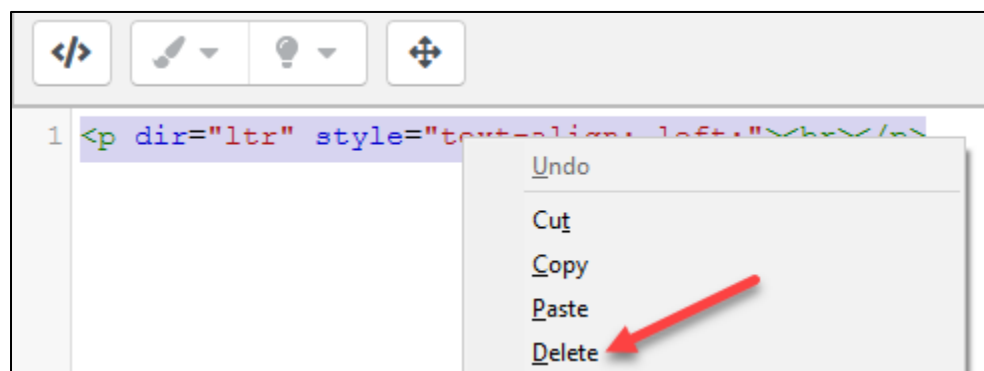

- Click on the **HTML** icon.

Note: The editor changes from a normal word processor style to an HTML code editor.

- Delete all of the **code** in the editor.

- Paste the code from the **HTML Weather Code** (step 9, previous section) into the **Content** textbox.

```
1 <!-- Begin WeatherLink Fragment -->
2 <iframe title="Environment Canada Weather" width="287px"
  height="191px" src="https://weather.gc.ca/wxlink
  /wxlink.html?cityCode=on-107&lang=e" allowtransparency="true"
  frameborder="0"></iframe>
3 <!-- End WeatherLink Fragment -->
```

12. Click on the **Save changes** button.
13. Click on the **Turn editing off** button.
14. The **HTML block** appears with a weather widget inside.
